1. Software Installation

Get the software package, click “HSPA USB Modem_installation.exe” to install the Software.

A new icon will appear on the computer desktop once it finish the installation.

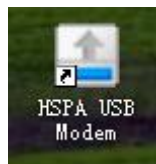

2. Modem Setup

Insert the SIM Card into the Modem’s SIM Card Slot.

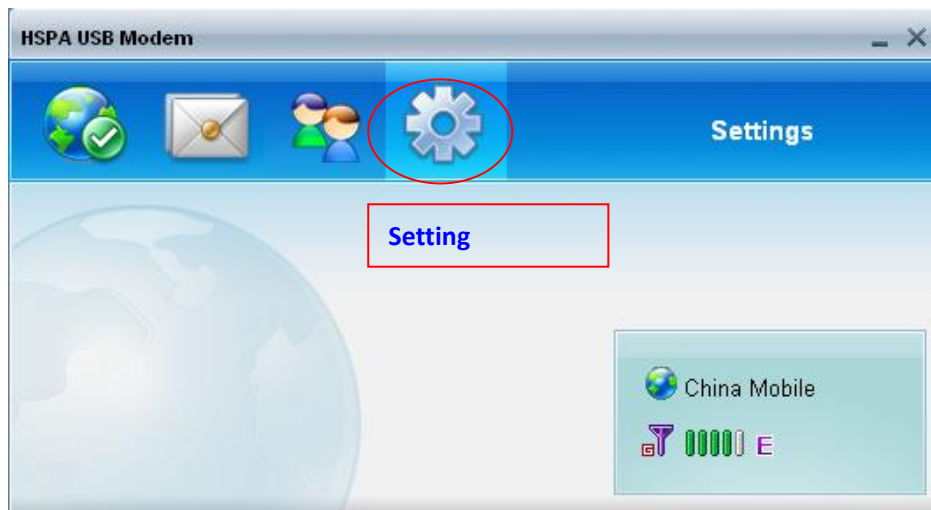

Connect the M300u modem to the computer via USB cable.

The computer will automatically find the hardware and install the driver for the M300u.

3. Internet Connection

Double-click on the icon and then click “Setting Button”

(Setting Button),

Select “Connection Profile...”, it will pop-up menu as Figure 2.

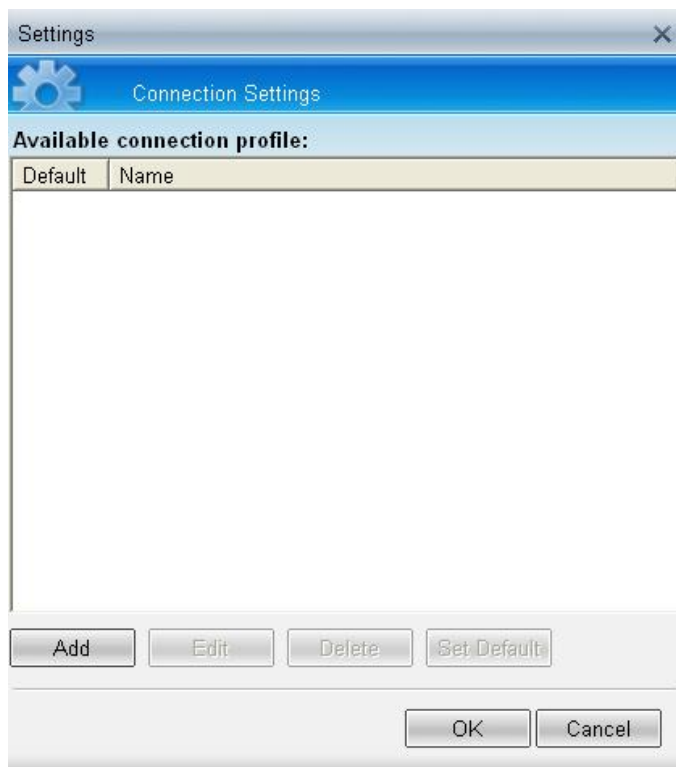

Figure 2

Click "Add" to add new APN, it will pop-up Figure 3.

Figure 3

Now you have two options:

- A. New profile --- select this to create APN manually
- B. Choose from predefined list

If select “New profile”, it will pop-up the following Figure 4.

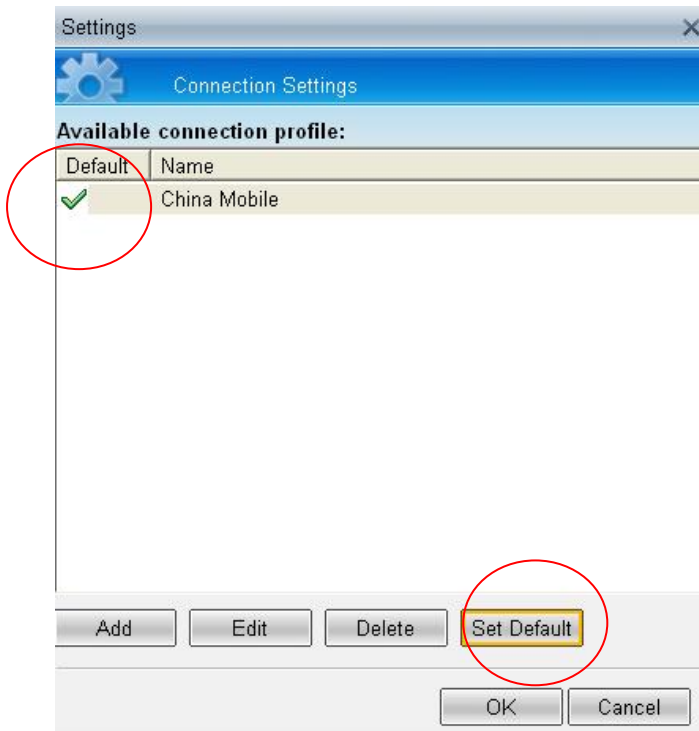

Figure 4

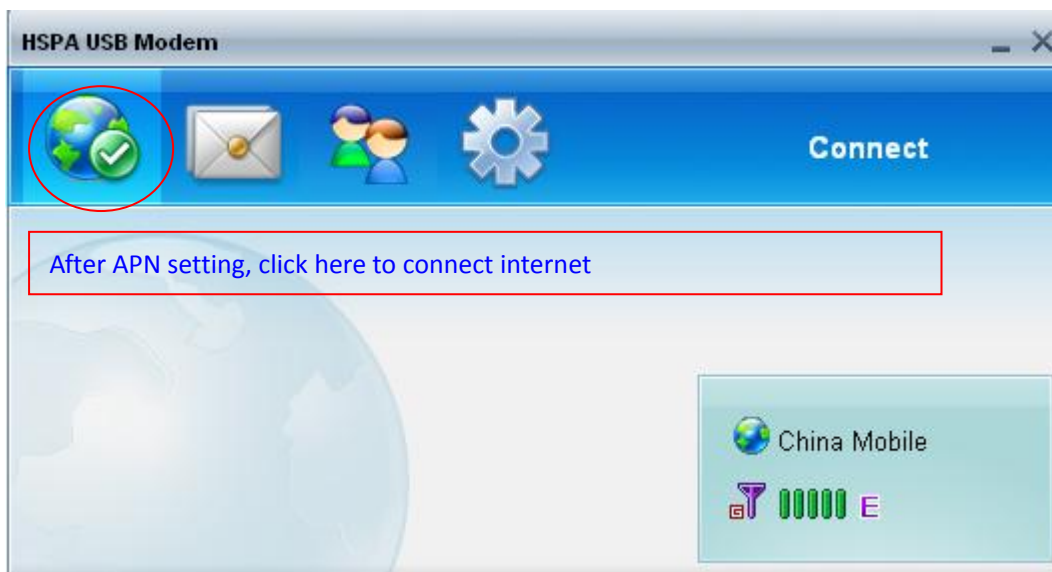

Please fill in the information parameter (This information parameter is from Network Provider), and save it.

If select “Choose from predefined list”, please select the existed APN setting.

After APN setting is finished, please “Set Default” the Connection Profile Name. Then there will be a click marked. Click “OK” to save parameter.

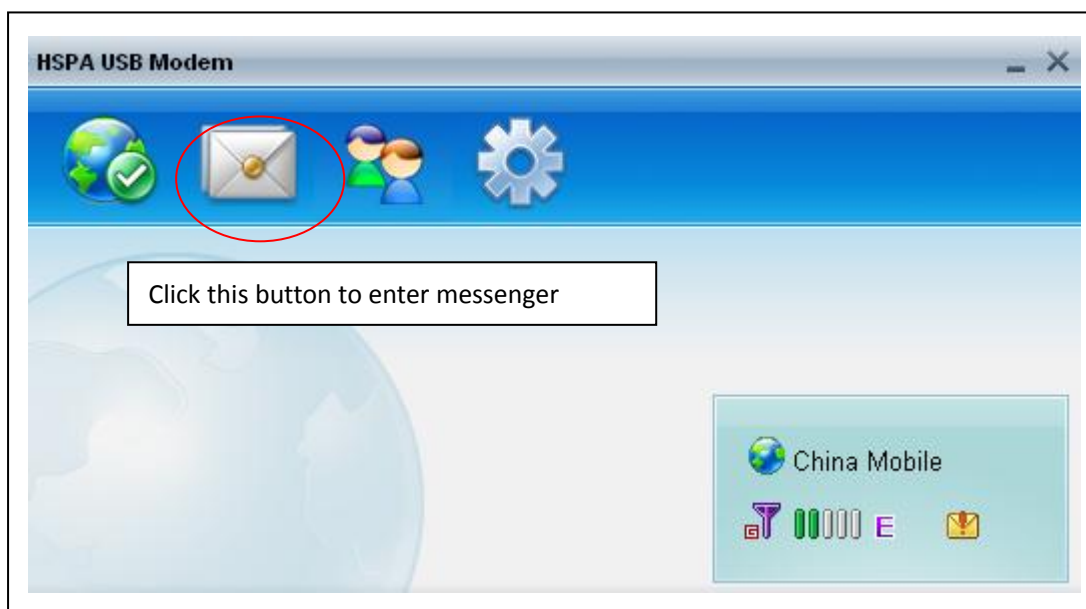

Double-click on the icon like following marked in red circle to connect the network.

Notes: The manufacture reserves right to change or improve the information and specification without notice!
